PLANTING FOR THE FUTURE
PLM SUCCESS WITH CENTRIC SMB AT TENTREE
PROTECT THE WORLD YOU PLAY IN

Since 2012, tentree (stylized with a lowercase ‘t’) has been relentlessly building a new kind of environmentally-conscious apparel business from its seat in Vancouver, Canada.

Described by CEO Derrick Emsley as “a tree-planting company first and an apparel brand second,” tentree commits to planting ten trees for every single product sold. Guided by three principles – stewardship, transparency and community – tentree carefully targets the places that will benefit the most from its planting efforts. Laser etched tokens affixed to each garment allow customers to track where their trees are taking root, and to understand how their purchase helps empower communities in countries like Haiti, Senegal, Ethiopia and Madagascar.

But while sustainability comes first for tentree, product is anything but an afterthought. The company creates high-quality menswear, womenswear and accessories that encourage people to venture outdoors and engage with their environment.

Today, tentree designs and develops more styles with each passing season and its products are now sold across North America through retail partners, wholesalers and the company’s own e-commerce channel – with growing interest from retailers in Australia and Europe.

ANNUAL GROWTH AND ACCOUNTABILITY

The tentree message has resonated with consumers and the company has planted over 25 million trees to date. To keep pace with this rapid escalation of consumer demand, the business grew its headcount by 6 between 2012 and 2016. As of 2019, 53 people work at tentree, with 20 of these joining the company in the past year.

“The pace of growth has been exciting, but it’s also been a definite challenge in terms of volume alone,” says Emsley. “Going back to 2015, our team tripled in size. In just five years we moved from printing a few t-shirts to more than 500,000 annually. As a result, the tools we were originally using to manage our internal processes – spreadsheets and emails – very quickly became unsuitable when we needed to scale production.”

As an environmentally and ethically progressive organization with transparency at the heart of its relationships with customers and suppliers, tentree also recognized the limitations of its existing technologies in other key areas. “We are dedicated to socially responsible manufacturing but having so many different, disconnected forms of communication was making it difficult to get the level of internal accountability and supply chain traceability we needed,” Emsley says. “As our SKU count grew, those old methods of production tracking were beginning to hold back our ability to scale without compromising on our core values.”

To manage the mounting volume of new product introductions, a yearly influx of new staff and to better track design, development and production, tentree began, in 2015, to investigate new technologies.

AFFORDABLE, ADAPTABLE, AVAILABLE ANYWHERE

Like many other small-to-medium brands seeking technology guidance, tentree looked to its peers – most of whom it discovered were using PLM to manage their product design and development processes.

“We went to a lot of trade shows and spoke to a lot of other brands that we looked up to and we learned that where we relied on...
After examining the market, Emsley, Kononuk and their team realized that the traditional licensing model favored by many software vendors made acquiring PLM prohibitively expensive for a business as small and fast-moving as tentree.

“From our perspective, getting cash out of our pockets and having a server up and running were both really hard for our small, fast-moving business,” explains Kononuk. “We didn’t want to invest in a solution that would require us to pay costly support for or employ an internal team to get the most out of it. We also wanted to partner with a vendor who had experience growing a company the same way we had.”

Shortlisting only the small number of PLM products that offered a more attractive subscription pricing model, tentree quickly selected Centric SMB – a cloud-based solution specifically tailored for small businesses. “We evaluated a number of solutions, but Centric SMB was the only one that matched our capability, usability and scalability,” adds Kononuk.

For tentree, though, acquiring a cloud-based PLM was about more than just cost. “We’re a young business made up of people from a young generation, so we live on the internet,” explains Kononuk. “We needed a solution that was accessible from anywhere, available to us at all times and adaptable enough to grow as we did. Centric SMB was affordable, had everything we needed out of the box and the suite of additional modules made sure it would be scalable as our needs evolved. We wanted to lay foundations to help us grow – not just for the next two years, but for the next five or ten.”

**Intuitive Intelligence**

With a team of primarily digital natives, tentree was also drawn to Centric SMB’s usability and its industry-leading integration to Adobe Illustrator.

“Having such a user-friendly interface really speeds up the onboarding process, making it very easy for new people to learn the software,” says Kononuk. “And for our young designers, who love the Adobe Creative Suite, Centric’s Adobe Connector allows them to remain in the environment they’re comfortable with and still collaborate with technical designers and other teams who are working directly in PLM.”

And beyond the abstract of improved user satisfaction, the intuitive, collaborative nature of Centric SMB has also delivered more concrete results.

“Prior to implementing PLM, a single team member would have to manually update a cumbersome master sheet with any additions or changes to our lines, but now a designer working in Illustrator can push a style to PLM, and our merchandising and line management teams will receive it for review instantly,” adds Kononuk. “That process used to take up to two days, but by collaborating in Centric SMB we can manage the same updates in an hour and have our line sheets exported and ready to go.”

Three years on, tentree retails products in over 1,000 stores worldwide, has intentionally reduced its number of styles by 20-30% to focus on depth rather than breadth, has strengthened relationships with key partners working to produce sustainable and biodegradable materials, and has increased its number of categories from 15 to 20, adding accessories such as wallets, backpacks and water bottles. Centric SMB is an indispensable tool that teams work in every day at tentree, and as it looks to the future, the company is considering taking advantage of features such as ERP integration, the Calendar Management module and Centric’s open API to strengthen collaboration and communication across the business.
ABOUT TENTREE

The beautiful landscape we know and love is fast disappearing. At tentree, we believe that we can inspire a new group of consumers to tackle the environmental issues we are now faced with. By planting ten trees and ensuring that all our clothing is produced responsibly we allow each and every customer to make a difference. Our commitment to the environment isn’t just a catchy hook to drive sales. It is something we fundamentally believe in, that will have an enormous impact on our environment going forward. It’s your world, your life, your playground. Let’s protect it – together, we can build forests.

Tree planting is a way of restoring the environment, maintaining ecosystems, and making our world a healthier place to live. This isn’t new; but what is new, is how we have used the concept of planting trees to inspire entrepreneurship, build sustainable communities, provide shelter and generally increase quality of life.

The founders of tentree have years of experience in the tree planting industry and have used this to create a business model that ensures trees are planted sustainably and in a way that will have the greatest impact. Some of the many benefits of planting trees include:

- Creating and restoring bio-diversity
- Removing greenhouse gases from the atmosphere
- Creating bio-precipitation
- Building sustainable and resilient natural ecosystems

ABOUT CENTRIC SOFTWARE

From its headquarters in Silicon Valley and offices in trend capitals around the world, Centric Software provides a Digital Transformation Platform for the most prestigious names in fashion, retail, footwear, luxury, outdoor and consumer goods. Centric Visual Innovation Platform (VIP) is a visual, fully digital collection of boards for touch-based devices like iPad, iPhone and large-scale, touch-screen televisions. Centric VIP transforms decision making and automates execution to truly collapse time to market and distance to trend. Centric’s flagship product lifecycle management (PLM) platform, Centric 8, delivers enterprise-class merchandise planning, product development, sourcing, business planning, quality, and collection management functionality tailored for fast-moving consumer industries. Centric SMB packages extended PLM including innovative technology and key industry learnings tailored for small businesses.

Centric Software has received multiple industry awards, including the Frost & Sullivan Global Product Differentiation Excellence Award in Retail, Fashion, and Apparel PLM in 2018 and Frost & Sullivan’s Global Retail, Fashion, and Apparel PLM Product Differentiation Excellence Award in 2016 and 2012. Red Herring named Centric to its Top 100 Global list in 2013, 2015, and 2016.
